

Research assistant position on neuroscience **in Salamanca (Spain)**

The research group of Juan P. Bolaños offers a research assistant position, holding graduate level at least, to start immediately (December 2015-January 2016) for a period of 2 years. Prof. Bolaños' research group is based at the Institute of Functional Biology and Genomics (IBFG), a University of Salamanca-CSIC joint research institute based in the city of Salamanca (Spain).

His group is interested in understanding the molecular bases responsible for the bioenergetics-redox coupling in the central nervous system, both under normal and disease-related conditions. The typical experimental approaches that the selected candidate would be involved include neural cell primary cultures, molecular biology techniques, cell signaling assessment, biochemical analyses, immunocytochemistry, and *in vivo* behavioral tests in mice for the pre-clinical analysis of new potential therapeutic compounds against neurological diseases. Accordingly, it is expected that prospective candidates should hold proven experience in these technical skills.

More information about the research activities and recent publications of Prof. Bolaños' group can be found in <http://ibfg.es/en/juan-pedro-bolanos-en>.

Interested candidates should send a motivation letter, a Curriculum Vitae (including a transcript of the results), the Skype name, and the names and contact details of two references, to Julio Flecha García (julio.fg@usal.es) as soon as possible.
